Hola de nuevo (Este email está en español, para compensar por el anterior).

Umberto y yo estuvimos trabajando en como seria ese systematic map que les propusimos. Creo que avanzamos un poco. Lo hicimos mientras leiamos el paper de los suecos. Por favor, opinen!

Abraços,

Martin

PD: Aca va:

==========================

Systematic Mapping

2.1. Definition of Research Questions (Research Scope)

RQ1: What are the most investigated aspects of NFR for web applications over the last years?

RQ2: How the different models for NFRs have evolved over time?

RQ3: What kind of support (in the broadest sense) has been proposed for NFRs in the context of web applications?

2.2. Conduct Search for Primary Studies (All Papers)

   (Non-functional OR quality OR nfr OR qos OR ????)

AND (constraint OR attribute OR aspect OR parameter OR concern OR ????)

AND (web service OR service composition)

Choice of databases: ACM, IEEE, Google scholar, Citeseer, DBLP?

2.3. Screening of Papers for Inclusion and Exclusion (Relevant Papers)

Inclusion Criteria

full papers, M.Sc and PhD dissertations, technical reports and grey literature whose main topic are related to NFR for web applications. When several reports of the same study exist, only the most recent one was considered.

Exclusion Criteria

NFR for web applications is not one of the main subjects of the paper.

?????

2.4. Keywording of Abstracts (Classification Scheme)

Classify the papers in categories, based on abstract (or abstract +
intro + conclusion, in certain cases).

Examples of categories are (from the Swedish paper): Validation
Research, Evaluation Research, Solution Proposal, Philosophical
Papers, Opinion Papers, Experience Papers.

2.5. Data Extraction and Mapping of Studies (Systematic Map)

bubble plot, number of papers by year, etc...
